## Disclaimer

This document is part of 2do YearBook application and it is free to download. The handbook and the application are property of Alessandrini Internet Solutions (Italy), and no modifications are allowed.

## Versions differences

According to the hardware capabilities of mobile devices, 2do YearBook may appears a bit different.

The “L” mark near the number version of the application means that this is the light version, without WEB functionalities. If you have the Light version, Web Options in Main Menu should not visible.

Some versions (i.e. L version) supports only English, instead of English and Italian.

## Compatible devices

There are some different version of 2do YearBook:

- Nokia™ dedicated version, for 60 series, is compatibile with 3600, 3650, 3660, 6600, 7610 and so on
- Generic shareware version is compatibile with many devices with the following characteristics: midp1/2, 128x128 colour screen at least

More updated informations at [www.maxboom.it/mobile](http://www.maxboom.it/mobile) .

Please, feel free to send an e-mail to [support@istantweb.com](mailto:support@istantweb.com) if 2do YearBook is not compatibile with your device: I'll try to fix the bug or make a special version to expand its compatibility.

## What is

With 2do YearBook you'll able to save your work shifts for a whole year, and retrieve it when you want, just using your phone. It shows a year calendar, one month at once, in 12 tables, and paints each day with the color of related event/shift. You can insert a text-note for each day of the year, change any shift description and color, use the 4-alarms function, which plays an alarm only when related shift happens.

This application is also able to retrieve the shifts table from the internet, even if your farm (or you) uses this feature. (not for the Light version)

### Features:

- . storage of the shifts of a whole year
- . differentiation of 4 turns, rest, vacations and festive through editable colors
- . viewing of the whole year in 12 monthly tables
- . text of turns, rest, vacations, festive is customizable
- . manually change the represented year.
- . up to four alarms for each of the 4 shifts
- . retrieve data from internet (not for Light version)

## Instructions

Once you have been downloaded 2do, open it with your java menu; after the presentation and the copyright page, you will have to select your language from the menu (if available in your downloaded version).

Surfing the main menu you can modify some options, open the calendar, set alarms, text and colors, read instructions and review the presentation..

To read copyright notes again, you have to click on 'credits' from the main menu, and press [GO] once.

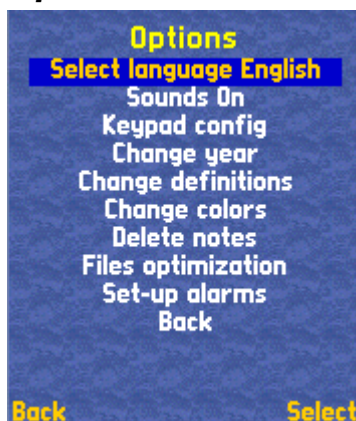

## Surfing the menu

From the About screen, press a softkey or **click** (the button at the center of the arrow keys) twice to access to the main menu. Then press up and down arrow keys to move through the options, and click to access to the selected option. In all the menu is available the “back” option, as the last row of the menu; in main menu this voice will be “Exit and Save”, to exit the application.

The Softkeys (depending on your device) are used to select (instead of click) and back (instead of back command): you can decide yourself which are the most comfortable and quick keys to use.

## Options

### Select Language

It is possible to select both English or Italian.

Note that some versions are only in English, so this option could be not available.

### Sound On / Off

Simply mute sounds. Switching off the sounds means that the alarm-events will not play. This feature could be not available for the devices with no sound capabilities.

## Keypad config

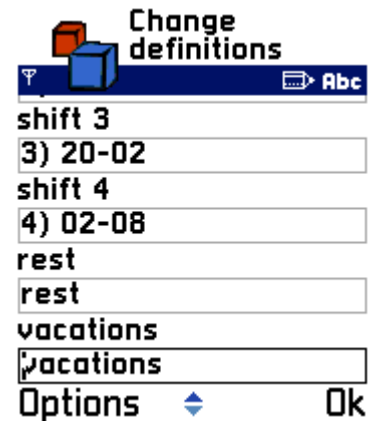

This option make you able to change the Softkeys setup, selecting from a list of devices; the selection could be needed for certain devices which are unrecognizable by Java.

## Change Year

Here you can set the current year of the calendar without losing any information about shifts and notes, which will remain attached to the same month/day number.

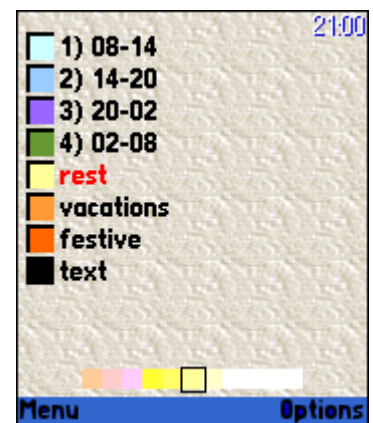

## Change Definitions

You have 4 available shifts plus 3 rest-days. These definitions are not static and you can decide to rename them all with your own shifts or with any event you want. Want to use 2do YearBook for your free-time? Simply rename the definitions as "Swimming", "Guitar course", "Body building", "Therapy" or any recurrence you want 2do to remember for you. Keep in mind that the alarms are bound to the first four events.

## Change Colors

Text and background colors of each event/shift can be changed as you like. You have up to 7 colors to customize, to facilitate the reading of the calendar, even if you don't like default colors. The eighth color is the text color: you may choose a color which should be in contrast with the other 7 colors. This option is available from both main menu and calendar. Use up and down arrow keys to change row, and left and right to change the color for the selected definition.

## Delete notes

Go here if you want to erase the notes from the calendar. You have to choose between deleting only the expired notes, or all the notes of the year. Once deleted, there is no way to recover it.

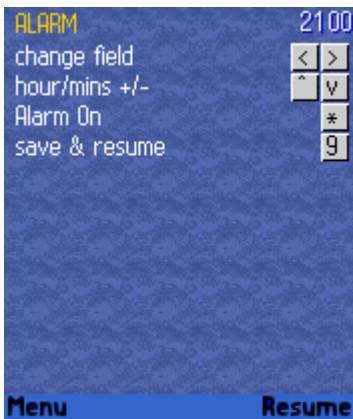

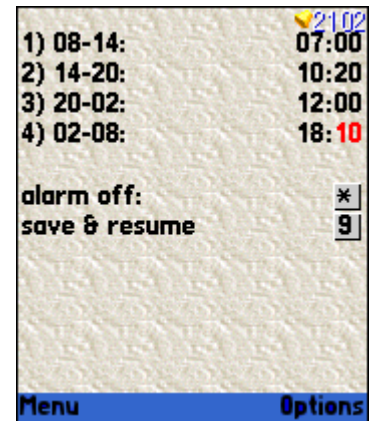

## Files Optimization

Adding and deleting records (categories and products) many times may increase archive dimensions more than needed: use this function to reduce memory usage and free some space. If you exceed the maximum available space for storage, using this feature could free some space to add more records.

## Setup Alarms

This Alarm system let you to avoid to plan the alarm clock every day, basing on the related shift. Plan the three/four alarms you need only once, then the system will play the right alarm related to the shift of the day. I.e. if you set the alarm 1 to 08:00, it will play only if today comes with the first shift !

Note: to use this feature, you have to leave opened the application in your phone. 2do YearBook must run in background or foreground, to control the alarm clock.

You have up to 4 alarms to set up: one for each shift. It's possible to call this function from both the calendar and the main menu. The "save & resume" option is available only if you came from the calendar; to save your settings, if coming from main menu, simply select "Menu". If you choose "Options", the Options menu will be opened, listing the available functions and related keys.

Move through the 4 shifts hours and minutes with left and right arrow keys, and change values by pressing up and down.

In the end, you can activate or deactivate the whole alarms, pressing [\*].

## Web Options & Update

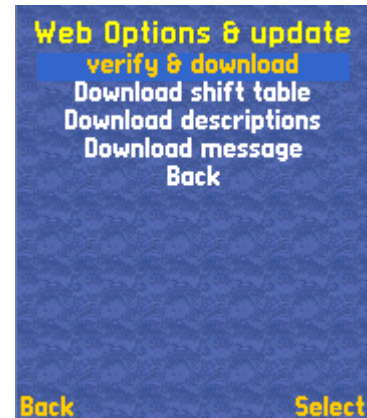

Notes:

- this option isn't available for the "L" (light) version.
- if you want to use these web options, you may ask for your user ID to your firm, or obtain a single account from us, to have a back-up of your shifts in internet, and modify/have a look when you want
- to know more or use this feature please contact our support at [support@istantweb.com](mailto:support@istantweb.com)

This application is able to connect to internet and download colors, shifts descriptions, shifts year-table and communications.

The operation is simple: one firm can access to a special web application and configure a list of its dependents and related annual shifts.

Each dependent, then, will be able to download from the account of his firm, his own shift table, logging with personal user and password.

All these options are password-protected. You must know the generic firm username and password, and your personal username and password to access the web server.

### Verify & Download

Each shift-worker, in the web configuration program, has a download flag which indicates that he needs to download shifts, descriptions or / and communications. From Web Options Menu, in your phone, you can test this flag and, if needed, download new informations. This flag should be set up by your Firm, when needed.

### Download Shift Tables

Select this function to download your shifts for the whole year, without verifying any flag. Once downloaded, your calendar will be configured as in the web-server.

### Download Descriptions

You will download the events descriptions and colors from internet, previously written on the web by your firm.

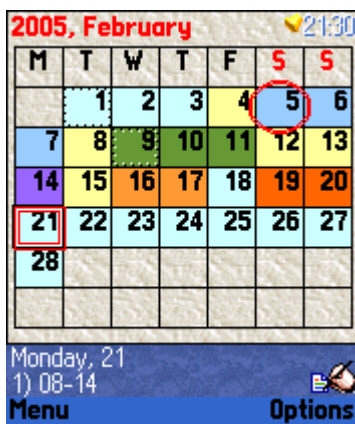

### Download Message

Access your account in the web and look up for a new communication from your firm.

## Calendar

Here you can look at and set-up the daily events of the whole year: you will see a month at once, where each cell of the table represents a day. Here some tips:

- each day is colored in according to the related shift
- the rounded cell is the current day
- the cell with an underlined perimeter represents the cursor (current selected day)
- a dotted perimeter means that the day has an attached note
- in the upper side of the screen there are current year/month, current time and a bell icon, if the alarm is active
- lower the screen you can find selected day of week and related shift description
- you can move the cursor left/right and up/down with the arrows keys. Change the month moving up or down to the edge of the table.
- list available functions and keys, or back to main menu pressing [Options].
- activate EDIT mode [\*] to modify the shifts
- to insert a note press [0]
- change shifts colors with [#]
- set up alarms: press [9]
- look at shifts descriptions and colors with the legend [5]

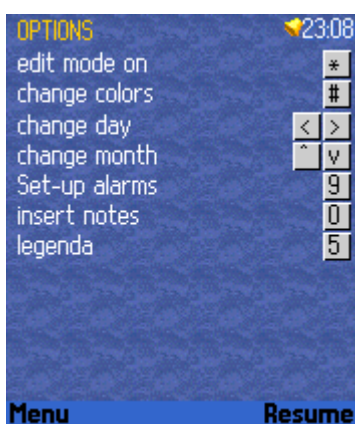

The viewing of the calendar is very simple, and the colors will remain you to the right information with just a glance.

See your Sundays in the picture: four colors this month.. only a rest (the orange color) ! In just a second on my phone ☺

At the bottom of the screen you can see the selected day of week / month, and the related shift description.

The icon on the bottom-right corner means that we are in Edit mode. When in this modality, the cursor become underlined (look at day 21) and we can configure the shifts for each day.

### Functions and Keys

Press the softkey under [Options] to look at the available functions or exit to the menu.

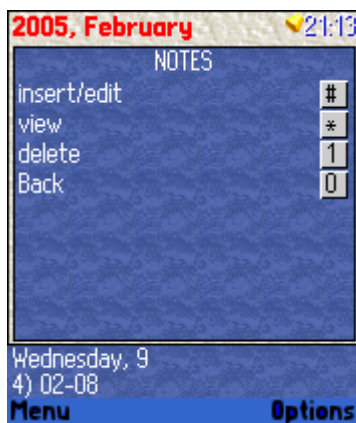

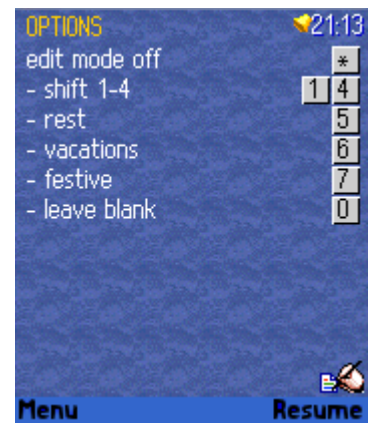

The **Options menu** shows the functions and related keys for the contest you're in. If you're setting-up alarms, options menu will shows the alarms related commands; is you're browsing the calendar, options menu will list all the available functions to surf and manage current monthly table and shifts... and so on.

## Edit Mode

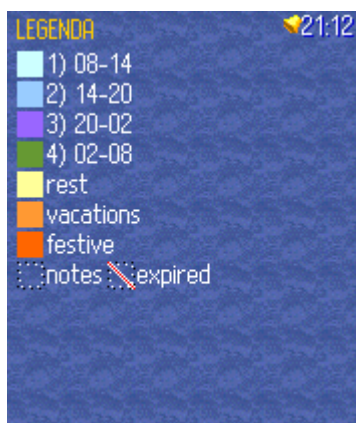

To modify the shifts of current month, select the first day and activate the EDIT mode, pressing [\*]. Then press [1] - [7] to insert related shift 1-7, or [0] to leave the selected day unchanged.

You can insert all the shifts in sequence, day per day: each time you press a key, the cursor will advance of one day. Press [\*] again to stop EDIT mode. Press Options to go to options menu and look at available commands. A small icon on the bottom right indicates that you still in edit mode.

## Insert a Note

Select the day and press [0]. If a note already exists, you'll be able to view, modify and delete it, elsewhere only the "add" command will be available. You can insert notes until the end of the available storage space for the application; using File Optimization feature, from main-options menu, you can compact the database and free some additional space.

## Legenda

While you're viewing the calendar, press [5] (or click) to open the Legenda menu, which lists all the events and related colors

## Set up alarms and colors

Calling these two functions from the calendar or the main-options menu it's the same. Look at detailed informations at the previous paragraph.

## Commands

Here a list of all available commands in the different views and in the edit mode. However you can easy access to all these commands pressing a softkey to enter in option menu, or by pressing [0] to access to the edit menu. Commands are ever listed and accessible at every moment.

Functions	keys				
	Calendar view	Edit Mode	Set Colors	Set Alarms	Insert Note
